

Good Environmental Practice is to:

- Demonstrate environmental permits and proof of compliance with local laws and regulations.

Disclosure of indicators/discharge on IPE or EU PRTR.

- Set up a waste management plan that includes monitoring of air quality, minimisation of air pollution, management of wastewater, enhance the reuse of water and assuring waste water treatment efficiency.
- Third party verification of chemical management.
- Measures in place to protect workers and local inhabitants from exposure to hazardous chemicals.
- Set reduction targets on Greenhouse Gas Emissions pathways to achieve them. H&M Group has set the goal to have a climate neutral supply chain by 2030. By 2025, we should be 25 % more energy efficient per piece.
- Environmental damage in the surroundings should be remediated for example through ensuring healthy drinking water, actions to restore ecosystems, et cetera.
